State Street Pump Station and Force Main Improvements

As part of the ongoing dedication to provide top quality, cost effective, and environmentally safe water and wastewater services to our customers, YCUA will be making improvements to the existing State Street wastewater pump station and discharge force main. The pump station is located on the north side of State Street between Glengrove Avenue and Nash Avenue. The discharge force main heads east on State Street to McCartney Avenue, then north on McCartney Avenue before crossing Wiard Road to the intersection of Wildwood Avenue and Watson Street.

The first phase of the work will involve installation of the new discharge force main following the route described above, starting at the pump station site along State Street and proceeding north and east to the downstream end of the pipe near Wildwood Avenue and Watson Street. Following completion of installation of the new force main pipe, construction activities will be concentrated at the pump station site.

Road closures with posted detour routes are not anticipated during the project, but intersections and driveway approaches may be blocked for brief periods. Access to homes and businesses for services such as mail delivery and trash pickup will be maintained at all times during the project. Although every effort will be made to minimize disruptions caused by the contractor's operations, construction work will invariably result in some inconveniences. No disruption to water or sanitary services to the homes and businesses within the project area are anticipated.

The project was designed for YCUA by OHM Advisors, Inc. (OHM), of Livonia, Michigan. On behalf of YCUA, OHM will also be administering the construction contract and providing full-time, on-site observation of the work by Verdeterre Contracting, Inc., of Belleville, Michigan.

Work is scheduled to begin the week of May 2, 2022. Installation of the new force main pipe is anticipated to be complete by late June with the follow up work at the pump station site finished by early November. The patience and understanding of all those affected by the construction of these important upgrades is appreciated.

Contacts for the project are:

OHM: Fraser Payne
(734) 466-4502 (leave a voice mail, Fraser will call back)
